Lancaster Farming

VOL. 13 NO. 50 | Lancaster Farming, Saturday, November 9, 1968 | $2.00 Per Year

Eleven different Farm Women's Societies were among 18 women's service clubs and organizations which recently completed the enormous task of assisting the Tuberculosis and Health Society in the preparation of 76,000 pieces of campaign mail for the 62nd annual Christmas Seal campaign. Shown above, left to right, are members of Farm Women's Society No. 1, at their tasks of "stuffing" envelopes with campaign material: Mrs Elmer Hershey, Lititz R2; Mrs. Amos Shenk, Lititz R2; Mrs. Roy Brubaker, Lititz R3, president of the society; Mrs. Ira Shearer, Lititz R4; and Mrs. Martin Moore, Lititz R1. The other Farm Women's Societies which helped in campaign preparation were Numbers 2, 9, 10, 14, 15, 16, 17, 18, 21 and 25. In addition, women from Iris Club, Lititz Woman's Club, Ephrata Woman's Club, Woman's Club of Lancaster, Towne Club, [illegible] Society and the Ladies Auxiliary to the Purple Heart No. 107, Lancaster County, also worked for the Society as mail volunteers. The annual campaign for funds for the TB Society begins officially on Tuesday, Nov. 12, and ends on Christmas Day.

Sheaffer Cloisterdale Farms Become Affiliated With Miller And Bushong And D. E. Horn Co.

Ray Sheaffer of L M Sheaffer-Cloisterdale Farms, Ephrata, Pa., and Allen Graybill of the Grimes Poultry Processing Corporation, Fredericksburg, Pa, announce that effective November 1 the L. M Sheaffer-Cloisterdale organization became affiliated with the Grimes Corporation

L M Sheaffer is one of Pennsylvania's oldest and largest egg processing firms A substantial portion of their marketing requirements come from their recently developed Cloisterdale Farms, Inc which is one of the largest automated egg production units in Pennsylvania The balance of the eggs marketed by Sheaffer are supplied by independent producers

Grimes, which is jointly owned by Miller & Bushong Inc of Rohrerstown, Pa. and D. E. Horn & Co., Inc of York, Pa, processes and markets ice pack, frozen, and further processed poultry in the northeastern metropolitan area.

L M. Sheaffer-Cloisterdale will be operated as an independent unit Sheaffer, who has been responsible for its growth and development, will continue as general manager with no changes in policies or personnel contemplated.

It is felt that this step will retain an important egg market for the Eastern Pennsylvania Poultry Industry and the affiliation of L M. Sheaffer with these agri-business firms will improve their ability to expand as a leading egg supplier to northeastern markets

Poultrymen Elect Directors; Vote For Diagnostic Laboratory

The Lancaster County Poultry Association elected four directors Thursday night at their annual banquet held at the Farm and Home Center They are Claude Hess, 2462 New Holland Pike; Aaron Glick Quarryville R2 and John W Melhorn, Mt Joy, all representing poultry producers and Lorin Weigard, 1031 Devonshire Road Lancaster representing Allied Industry.

Members also voted 6 to 1 in favor of having a state operated diagnostic laboratory in Lancaster County.

Donald Horn, vice president of the Pennsylvania Poultry Federation told the 160 poultrymen and friends present that the Federation directors have decided Pennsylvania needs a strong state-wide organization existing to provide service for members. "I feel," he said, "the most important service the Federation can do is to represent you in political circles This we will do"

Horn listed the recent changes and activities at the state level as 1, the hiring of a full time executive director; 2, making organization changes and 3 financing the Federation by an aggressive membership campaign and a fund raising banquet at Farm Show time which calls for selling 432 tickets at $50 each "We are well on our way to a sell-out at the banquet" he said

The Lancaster County Poultry Queen, Miss Geni Hiestand, is a student at the Chicago Art Institute and sent a telegram to John H. Hess, Association President, thanking the association for the opportunity to be the poultry queen.

The guest speaker was Furhman F Bailey, former assistant superintendent of Lancaster County Schools who spoke on the subject "Remembering and Forgetting"

Mrs Mary Hawk, local recording artist, entertained and John N Weidman was the master of ceremonies.

County Conservation District Makes Effort To Involve FFA Chapters And Individuals

The Lancaster County Soil and Water District Directors held their regular monthly meeting Wednesday night, in the Farm and Home Center and the main order of business was to discuss ways to involve Lancaster County FFA Chapters in the conservation contest sponsored by the Sears Roebuck Foundation.

A number of associate directors were present to hear the program explained by Henry Givler, Area Vo-Ag Advisor, and were in turn asked to go to each county school having a Vo-Ag department and present the need to actively engage in conservation activities and the conservation contest

Givler said there are two parts to the Sears Contest — chapter activities and a public speaking contest for individuals He said the schools know about the contest but only two of the nine participated last year.

The Foundation is offering $3,800 on the state level for the activity and Amos Funk, Chairman of the district, announced they will give a trophy to the top county chapter and the winning county public speaker.

The directors also approved the following cooperators to participate in conservation practices: Earl S Fisher, Brecknock

CREDIT DIRECTORS. Elected at the meeting of farmer owned credit associations Wednesday afternoon are (left to right) Paul Herr, Quarryville R1, director of The Federal Land Bank Association; John J. Long, Peach Bottom R1 and John H. Gibble, Myerstown R2, re-elected directors of the Lancaster Production Credit Association. The appointment was for three years. L. F. Photo

Large Crowd At Credit Meeting

The Annual Meeting of the Federal Land Bank Association of Lancaster and Lancaster Production Credit Association was held Wednesday afternoon at the Plain and Fancy Farm, Bird In Hand

Carl Brown, Manager, told the 350 stockholders and friends present that both locally owned associations had a very good year "We were able to increase our Land Bank Association by approximately $800,000 and Production Credit Association by about $500,000," he said.

"Under the tight money situation we have had some problem to get money at reasonable rates

Weekly Poultry Report

Fogelsville

November 5, 1968

(Prices paid dock weights, cents per lb., except where noted)

Light Hens 7½-8½, mostly 7½-8½; Heavy Hens 9-18, mostly 10½-14; Pullets 15-34, mostly 28-32; Roasters 10½-31, mostly 18-25; Ducks 18-35, mostly 24-30; Drakes 28-39½, mostly 35-39; Hen Turkeys 26½-32, mostly 30-32; Rabbits 26-45, mostly 30-35; Guineas 60-69½, mostly 64-67½; Pigeons (per pair) 80-1.55, mostly 1.00-1.15; Jumbo Squab 1.00-1.05.

Total coops sold: 821.

Eastern Pennsylvania And New Jersey

Prices of light type hens held unchanged in most quarters. An occasional unconfirmed sale was indicated as high as 99 cents on a small flock of floor birds. Generally offering prices tended lower as movement increased. Offerings of heavy type hens were short of a fair call. Prices paid at farm: Light type hens 7-9¾c; Heavy type hens — Too few sales to report prices. TURKEYS: Interest in securing commitments on live supplies for holiday ice packed trade continued good with offering prices ranging 24-25c on young hens. Interest on toms limited. Supplies about adequate for anticipated needs. Contractual movement continues of a regular nature with open market prices too few to report prices.

Eastern Shore Exchange

Broiler and fryer live prices averaged 15 29 cents a pound this week Prices paid ranged from a high of 17.9 cents a pound on Thursday to a low of 15.6 cents a pound on Monday. Total sales for the week were 588,700 head, down 71,300 from last week

From Where We Stand . . .

Don't Spread Your Manure On The Highway

We received word of a Northern Lancaster County Farmer who spread his manure this week. Now that's not news and there is nothing wrong with it. The fall and winter months are the time to do this.

The only problem in this case is that the farmer covered the public road with as thick a coat of manure as he did his field. At least that's what the eye witness reported. Need it be said the witness wasn't at all happy about the condition of the car when it was pulled into the garage.

On first thought, we would be inclined to think the same way. But let's stop and consider the situation a bit. First, there is a law that charges $50 for littering. Now we suspect that dropping or spreading manure on a public highway is littering.

We think the complaint was justified.

You may think, "Well, I have to take my loaded manure spreader on the road and no one is going to stop me. If those city slickers don't like the smell, let them stay in the smog-filled city."

But even if that doesn't shake you the fact is, we want to sell our milk, meat, eggs and vegetables to our neighbors who have to drive down the road through our stinky slop. And what kind of a public image do you think that creates for our farm produce?

This question must be answered by every farmer who must take a loaded manure spreader on the road. And when he does answer it sensibly, he will keep the spreader covered. Oh, yes, he'll also see to it that the spreading apparatus doesn't become engaged on the way.

It is only a case of treating your neighbors as you would like to be treated yourself. At least that's the way it looks from where we stand.

Chaperone Your Fire

Warm weather has dried out the woods again, perhaps more than the casual observer would realize, the U. S. Forest Service has cautioned. Fire danger in many parts of the U. S. still exists and some areas are especially dry. Hunters and other users of the nation's forests and wildlands are asked to be extra careful.

One of the most frequent causes of fire in the fall is the warming fire. The Forest Service slogan this year is "Chaperone your fire — don't let it go out alone." Because of cool, damp nights, it is easy to be lulled into a false sense of security — thinking a warming fire will go out by itself. But, such fires often spread as temperatures rise and winds pick up during the day.

This fall season, let everyone help protect the invaluable resources of the nation's forests, including wildlife.

Against The Grain

The people of the United States have always believed in the idea that a day's work was a fair exchange for a day's pay. Apparently, this is one basic thought that is still with us. Recent Gallup Polls have shown that 78 per cent of the American public favors a guaranteed job program so that everyone capable of working might have the opportunity to do so. In contrast to this strong support for guaranteed jobs, only 36 per cent of the people interviewed favor a guaranteed annual income. To the average person, the great drawbacks to government paying everybody a certain minimum income still seem to be two-fold. The cost, added to present welfare programs growing bigger every day, would be the last thing the nation's finances could stand, and politically it would be highly unlikely that the hundreds of local, state and federal welfare programs would be dropped or cut back. Secondly, something for nothing has never encouraged anybody yet to work harder to help himself, and so far that is the only way anybody has ever gotten out of poverty.

We are told that the millennium is coming when all the work in the country will be done by machines and most of us will have the burden of finding uses for our leisure time. So far, most of us haven't been troubled with this situation and find the idea of guaranteeing everybody an income as a matter of right, whether they work or not, thoroughly nonsensical.

Across The Fence Row

A salesman, trying to sell a housewife a home freezer, pointed out, "you can save enough on your food bills to pay for it."

"That's fine," answered the woman. "But you see we're paying for our car on the carfare we save. Then, we're paying for our washing machine on the laundry bills we save, and we are paying for our house on the rent we are saving. It looks to me like we just can't afford to save any more at the present time."

Many a man carves a name for himself, while others prefer to chisel.

Maturity is knowing when to speak your mind and when to mind your speech.

The man who moved the mountain began by carrying away small stones.
— Chinese proverb.

Youth And Age

"Son," said a father to his growing boy, "just remember one thing. I know a lot more about being young than you do about being old."

"The Man of The Hour" is usually the feller who made every minute count.

That breaking a mirror causes seven years' bad luck is utter nonsense — you should get pretty well squared away in no more than five years.

Local Weather Forecast

(From the U. S. Weather Bureau at the Harrisburg State Airport)

The five-day forecast calls for temperatures to average near normal with daytime highs in the mid 40's to 50's and overnight lows in the upper 30's. Cool over the weekend with moderation at the end of the period. Normal high-low for the period is 54-36.

Precipitation may total one-fourth inch as showers or snow flurries about Saturday and showers at the end of the period.

WHO FORGETS?

Lesson for November 10, 1968

Background Scripture: 2 Peter.
Devotional Reading: 2 Peter 1:12-21.

One night several years ago I ran out of gas on the Taconic Parkway between Poughkeepsie and New York City. By day the Taconic Parkway is a beautiful and scenic ride through the rolling country of Westchester and foothills of the Oatskill Mountains; by night it is one of the darkest and loneliest of thoroughfares.

Rev. Althouse

Fortunately, a few minutes after I coasted to a standstill, a state police car came up behind me and the patrolman offered to push me some seven miles down the road to the state police barracks where he would telephone a gas station for me. When we reached the exit that led to the barracks, I pulled my car off the road to wait while the officer went ahead to phone for a service truck.

Because someone forgets!

An hour and fifteen minutes went by and help had still not come. My companions and I had waited patiently at first, but as the night grew colder we began to be concerned. Had the policeman forgotten us, someone wondered? Oh no, we were certain he wouldn't have done that. But when another twenty minutes had passed, I decided to walk to the barracks and find out what had happened to our promise of assistance.

The officer, I found, was not there! He had been sent on another call and, in his haste, had apparently forgotten about us. Understandable, but how unpleasant to wait for help that doesn't come because someone has forgotten you!

This was a feeling shared by some Christians in the early years of the Christian Church. The Apostle Paul had taught the Church to expect that Christ would "return" in the near future. They had thus looked eagerly for his coming. Yet, he did not come and some of them began to ask: "What has happened to the promise?" Had Paul been mistaken? (Actually, Paul had somewhat revised his expectation.) Was Jesus still to return? Had he forgotten them? What kind of hope were they to hold to in these times of hardship and persecution?

Always scoffers

The letter we know as 2 Peter was written to answer these people. First of all, says the writer, Christians must understand that the presence of scoffers does not mean that the Christian Hope will not be fulfilled. There have always been scoffers and there always will be those who jeer at the faith and expectations of others. So what else is new?

Remember the past experiences of those who have waited upon the Lord. Remember the scoffers who ridiculed Noah and his "silly" ark. How they made fun of his conviction of imminent world destruction. How long he waited for that assurance to be fulfilled —but it did come!

Our problem, of course, is that God does not measure time as we do. What to us seems many years of waiting is for him but a "second," a minute interval in eternity. Our impatience is understandable, for we see things in the perspective of the short-run, while his is a long-run view.

What of our promise?

We need to remember that others in other times have also been disheartened by long waiting. Tyrannical men and fearsome powers have risen up to threaten both the Church and civilization, yet in the long-run, none of them have prevailed. In his own good time, God has swept away the Ghengis Khans, the Alexanders, the Cyruss, the Caesars, the Napoleons, the Hitlers, the Stalins and so many others. These "giants" have all turned to dust while God and his kingdom have continued on to the final fulfillment.

God will keep his promise, but what of us? If we are to wait patiently, that does not mean we are also to wait passively. It is not enought to wait for God to do his part; we must do our part too.

No, God does not forget; we do!

NOW IS THE TIME . . .

By Max Smith
Lancaster County Agent

To Keep Good Farm Records

The end of the calendar year is approaching when many sets of books will have to be closed out and evaluated. Farmers need accurate records the same as other business concerns and time should be spent in keeping these accounts and in using them to make plans for the future.

To Winterize Cars and Trucks

Cold weather is just around the corner and all farm vehicles and motors need some special attention. Not only is anti-freeze needed in motors but batteries must be checked, heating systems, and winter-tread tires may be needed All of these items need attention before the first blizzard or the first zero weather.

To Grind New Corn Often

Many farmers are using the new corn crop for their livestock and if special care is not used, this ground earcorn will heat and spoil in a few days How long it will hold without heating depends upon the moisture content; the ground mixture should be closely observed to learn how often the new corn should be ground and mixed. Moldy corn will cause digestible trouble in cattle and may poison them.

Conservation Essay Contest For 4-H Members Announced

The 4-H Soil and Water Conservation Essay Contest, sponsored by the Kiwanis Club, was announced this week The top three winners will receive $75 00, $50.00 and $25 00 US Savings Bonds respectively

Any 4-H member may enter. The essay should be 200 to 300 words in length written on 8½" x 11" paper. It may include pictures of good conservation practices and should deal with methods, value, purpose and importance of saving our natural resources

The essay is due in the Lancaster County Extension Office by November 19.

Weather Conditions Change Poultry Feed Requirements

People tend to eat more nutritious foods during the winter months than they do in warm weather, primarily to provide enough energy to keep the body at the required temperature.

Chickens also need more high energy feed during cold weather — not only to keep from losing weight, but to maintain egg production. according to a new "Poultry Handbook" published by the Cooperative Extension Service of The Pennsylvania State University.

"Since nutrient needs differ between warm and cold weather, a winter ration of laying hens must contain more protein and calcium," said Floyd W. Hicks, Penn State professor of poultry science Extension, coauthor of the handbook. "Many poultrymen fail to make such an adiustment in the feed during this time of the year and consequently, they are confronted with a slump in egg production."

Recommended poultry rations are just part of the many feeding and management tips provided in the new publication, Dr. Hicks emphasized. The paperback volume also contains sections on incubation, brooding, pullet rearing, table egg production, engineering, business management, marketing and processing. broiler production, turkey production, and poultry diseases.

The handbook is available for $1.50 plus 6 per cent Pennsylvania sales tax. Make check or money order payable to The Pennsylvania State University and send with your name and address to POULTRY HANDBOOK Box 6000, University Park, Pa., 16802.

This handbook is designed to be of use to both the commercial poultryman and the general farmer who includes poultry among his other enterprises. It is one of several handbooks being prepared by Penn State College of Agriculture faculty members that deal with modern agriculture.

Some of us make progress and some of us just make mistakes.

Eggs

Natures Most Perfect Food

Eggs are nature's most nearly perfect food, in spite of what you may have heard, said a poultry scientist speaking at an egg marketing clinic in Baltimore this week.

Eggs contain every food element man needs for health — except vitamin C, Dr. Cecil Howes, head of the Poultry Science Department at Virginia Polytechnic Institute, told more than 50 egg retailers and wholesalers.

"Two eggs supply nearly half the dairy requirement of every essential protein and mineral, as well as large amounts of most of the vitamins, man is known to need. In addition, eggs are low in calories." he added.

Eggs are used by nutritionists the world over as the standard for measuring the nutritive value of all over food products.

"Eggs are a high profit dairy case item," according to Dr. Carl Kepner of Purdue University. He told the food store management personnel that eggs provided a greater return on investment than any other dairy case item, according to a study conducted by Purdue. Sixteen per cent of the stores surveyed were able in increase the sale of eggs from $111 89 to $231 28 per linear foot of shelf space by just increasing the shelf space allotted to eggs. Return on investment rose from 121.5% to 311.3% during the study.

Grade (quality) has very little influence on the nutritional value of eggs, said Dr. Daniel Bigbee, University of Maryland Poultry Science Department. He said a grade C egg has as much food value as a grade AA egg, but it may not "look as good on the plate". Grades refer both to aesthetic (appearance) and functional (use) characteristics, he added.

Miss Virginia McLuckie of the Maryland Department of Markets spoke on "Consumer ideas about eggs — fact and fiction" She said most consumers tend to confuse size and grade when buying eggs Grade A eggs can be of any size, and a large egg can range from grade AA to C, she explained.

L. S "Tiny" Heemstra of Federated Eggs and Poultry Sales, Inc, Cleveland, Ohio, told how his company had been able to increase egg sales for certain food firms even more than those in the Purdue study by combining the techniques gleaned from Purdue with an intensive merchandising program.

Mr. John Mahoney, chief of marketing services and superintendent of weights and measures, along with Mr. Richard Thompson and Charles McCain, explained the Maryland Egg Law

The meeting was sponsored by the Maryland State Poultry Council in cooperation with the Department of Markets and the Poultry Science Department of the University of Maryland.

Pa. Farmers To Hold State Meet Next Week

The 18th annual meeting of the Pennsylvania Farmers' Association (PFA) will be held Nov. 10-13 at the George Washington Motor Lodge in Allentown, Pennsylvania.

Purpose of the four-day session will be to adopt policies for 1969 on issues that will be facing the Pennsylvania General Assembly and the U.S. Congress. The Farmers' Association is a general farm organization with more than 10,000 farm family members in Pennsylvania, and 45 county Farmers' Association affiliates in the Keystone State. The PFA is organized in 51 counties, and is affiliated with American Farm Bureau Federation, which is the largest general farm organization in the world.

Some of the key issues facing the delegates when they convene for business on Monday will be welfare, education, federal farm programs, gun legislation and marketing programs for farm commodities.

John Noble, a noted lecturer, will relate his experiences behind barbed wire in a Soviet labor camp in the Artic wastes of Siberia where he spent 9½ years. Noble's speech will be made at the Monday noon luncheon session.

Presentations by the organization's president, Gerald A. Biggs of McConnellsburg, and the PFA administrative secretary, Charles R. Ord, and a speech by Dr. Kenneth Hood, general manager of the American Agricultural Marketing Association will be highlights of the convention.

Roger Fleming, secretary-treasurer and director of the Washington, D.C., office of the American Farm Bureau, will be featured at the Tuesday evening recognition banquet. More than 25 awards will be presented to county affiliates and individuals at this session.

Traditional vespers service will open the convention Sunday evening, Nov. 10. Remainder of the program schedule is as follows:

Monday, Nov. 11, morning voting delegate session; noon address by John Noble; PFA Women's Committee special program on the Associated Women of the World; address by President G.A. Biggs; county presidents' dinner address by Leland Bull, secretary of agriculture; and ladies' dinner address by Mrs. David Holt, American Farm Bureau Northeast Women's Committee representative.

Tuesday, Nov. 12, morning voting delegate session and address by Charles R. Ord; annual PFA Women's Conference; marketing luncheon address by Dr. Kenneth Hood; general conferences; and recognition banquet.

Wednesday, Nov. 13, will be devoted to the adoption of 1969 policies and the election of Association officers for the next year.

You cannot further the brotherhood of man by encouraging class hatred.

POULTRYMEN, ELECTED DIRECTORS of the Lancaster County Poultry Association, Thursday night, are (left to right) Lorin Weigard, for Allied Industry; Claude Hess and Aaron Glick for producers. Elected but not present was John W. Melhorn. L. F. Photo

Helping the World Grow Better

ORTHO

Advantages of Fall Plowing Down
of ORTHO FERTILIZERS

1. Gives opportunity for part of spring work to be done when time is less critical.
2. Allow winter freezing and thawing to mellow heavy soils and provide better seed bed.
3. Causes fields to dry and warm up earlier — permits earlier planting.
4. Avoids soil compaction from working fields when too wet.
5. Escapes planting delays caused by wet springs.
6. Reduces run off and increases stored moisture.
7. Increases yields of many crops.

MARKET EGG PRODUCERS

EFFICIENCY PAYS

DO YOU KNOW THAT:

- A 12½% reduction in feed required per dozen eggs equals a saving of approximately $350.00 per 1000 hens.
- That our Early Bird All Mash Laying Feeds will definitely produce BETTER SHELL QUALITY over the laying year?
- That each ½% improvement in breakage can improve your income by $36.00 per 1,000 hens housed?
- A price improvement thru BETTER GRADE of ½ cent per dozen amounts to approximately $100.00 per 1,000 hens housed?
- If your feeding program gives you 1% better hen house liveability and ½ dozen more eggs per hen housed, it can mean as much as $175.00 extra return per 1000 hens?
- That GOOD records pay big dividends? Without accurate records you CAN NOT fairly judge the value of your program?
- That it's not the START, it's the FINISH that counts.

MAY WE HELP YOU DO A BETTER JOB!

Vo-Ag Teachers Hear Jay Irwin

The Lancaster County Teachers of Vocational Agriculture held their monthly meeting late Tuesday afternoon at Pequea Valley High School Vo-Ag department and heard Jay Irwin, Associate Lancaster County Agent, outline the new tractor driving certification program that became effective in January 1968. Under the new child labor laws a 14 and 15-year-old youth who wishes to operate farm tractors and farm equipment on farms other than at home must carry a certificate.

A certified teacher is also required to implement the 10 or 20 hour course. For this reason, with the backing of Penn State, Irwin appeared before the teachers to explore the possibility of setting up the required classes of instruction within the county Vo-Ag departments to enable students to pass the written and driving tests needed to satifactorally complete the course and receive the wallet card certificate.

The problem of scheduling a course where all interested persons could attend was discussed and also the grade level where it should be implemented. No final plans were made.

"It is important to abide by the law," Irwin said. "A person could really be in trouble if an accident occurred involving a youth who was not certified."

The 4-H tractor clubs are planning to conduct a program to prepare interested members to qualify for certificates," Irwin reported.

(Continued from Page 1)

the same as everyone else," he said. "Discount rates are not changing much and we predict the same for next year with the rate fluctuating only ¼ to ½ percent according to the season of the year."

The manager said presently mortgage contracts are being written at seven percent but being billed at only six percent.

"We have had a very good repayment schedule which shows farmers have had enough money to meet their obligations," he said.

In the election of directors John H. Gibble, Myerstown R2, and John J. Long, Peach Bottom R1 were re-elected to a three-year term in the Production Credit Association. Long is the current President and Gibble is now the Vice President. Paul M. Herr, Quarryville R1 was elected a director in the Federal Land Bank Association also for a three-year term.

Guest speaker was William M. Musser, Jr., Lancaster attorney. Musser edits a syndicated column for newspapers where he answers the public's questions on law. He used questions from this column for his presentation, asking individuals in the audience to answer them before he gave the lawful answer. The questions — some were also asked by persons present — dealt with such subjects as domestic problems, wills and deeds.

Other speakers included Robert Bucher, Assistant Manager, reading the minutes of 1967 meeting; Jacob Smith giving the FLBA Directors Report and John Long with the PCA Directors Report.

Richard B. Lefever, President of FLBA was the Toastmaster.

WHY? YOU ASK?

WHY SHOULD YOU LIST YOUR COUNTRY PLACE, FARM, LAND OR LOTS WITH WENTZEL?
Because Wentzels have many waiting city buyers who many times pay higher prices than your local buyers; because everybody knows Wentzel advertises regularly; Wentzels help arrange financing; Wentzel has a whole barn-full of ex-farmer boys (now skilled negotiators) to help sell your present place more quickly and efficiently and to help you buy or build your next home. Phone 394-3763 today.

Pa. Livestock Exposition Starts Today In Harrisburg

A new feature, "Barnyard Babies," has been added to the 12th annual Pennsylvania Livestock Exposition scheduled to be held at the Farm Show complex, starting today to November 16.

Starring in the new feature will be calves, foals (young horses), kids (baby goats), lambs, shoats (baby pigs), chicks, puppies, pony foals and burros.

Pens containing several of each of these animals will be in the main exhibition area of the Farm Show building beginning Nov. 10 and continuing until the Exposition's close.

Admission is free and youngsters as well as adults are invited to visit these "babies," go in the pens to become acquainted with the animals.

Personnel will be on hand from mid-morning to 8 p m. each day to assist visitors and to answer their questions.

None of these "babies" will compete in the Exposition, but nearly 4,000 entries of cattle, sheep, swine and horses will vie for premiums and other cash awards in excess of $50,000.

Here's the complete judging schedule:

Buy It — Sell It With a Classified Ad In Lancaster Farming

Pa. Farm Price Level Declines

The October Index of Prices Received by Pennsylvania Farmers was down 2 percent from a month earlier. Lower prices for corn, poultry, eggs and meat animals contributed most to the decline. The index was up 5 percent from a year earlier and 235 percent above the 1910-14 base.

Egg prices, advancing steadily since May declined to 40 cents per dozen, 5 cents lower than September.

Price Changes of Selected Commodities

	Oct. 15 Average Price	From Month Earlier	From Year Earlier
Milk, per cwt.	$ 6.20	$+0.05	$+0.25
Eggs, per doz.	.40	–.05	+ .09
Broiler, per lb.	.155	–.005	+ .02
Steers & heifers, per cwt.	25.00	–.30	+ .20
Hogs, per cwt.	19.60	–.70	+ .20
Corn, per bu.	1.08	–.04	– .19
Wheat, per bu.	1.12	+.03	– .15
Oats, per bu.	.67	+.02	– .11

U. S. Prices Received Index Down 5 Points

The Index of Prices Received by Farmers dropped 5 points (2 percent) during the month ended October 15, to 262 percent of its 1910-14 average. Lower prices for hogs and eggs contributed most to the decline. Higher milk prices were partially offsetting The October index was 4 percent above a year earlier.

The Index of Prices Paid by Farmers for Commodities and Services, including Interest, Taxes, and Farm Wage Rates advanced 3 points (¾ percent) during the month to a new high of 358 The index was 4 percent above a year earlier.

With prices of farm products lower, and prices paid by farmers and farm wage rates higher, the preliminary Adjusted Parity Ratio declined to 79, and the Parity Ratio to 73.

ARE YOU FEEDING YOUR BEEF CATTLE FOR 17.72 CENTS PER LB. OF GAIN?

Christ Landis of Ronks did on the Wayne Cattle Feeding Program using Wayne 32% Beef Balancer

Report on a Wayne Feeding Demonstration at the Christ Landis Farm, Ronks to demonstrate the results of a maximum grain-minimum roughage finishing program Thirty Hereford steers went on feed July 19, 1968 were fed in a typical steer barn and had access to a small exercise yard

PROGRAM: Hay was fed for 14 days starting with 5 lbs per head per day and tapering off to no hay at 14 days A 11 5% protein mixture of ear corn and Wayne 32% Beef Balancer was fed from start to finish Proper levels of Aureomycin and Stilbestrol were used Each steer received 3cc of Wayne Injectable A-D-E upon arrival and Wayne Lectro-Sul was used in the drinking water for 5 days The cattle were wormed with Wayne Cattle Wormer at 7 days. Feed was weighed daily.

Cattle were not individually weighed on arrival Incoming pen weight was 24,350 lbs. or 811 lb average. Cattle were weighed individually on 8/19, 9/24 and 10/25.

Christ Landis (right) and son Jim check Hereford steers in barn yard.

TOTAL FEEDING PERIOD
(98 days)

Total Weight	31,905
Average Weight	1,063
Total Gain	7,555
Average Gain Per Head	251.8
Average Daily Gain Per Head	2.57
Total Feed (lbs.)	64,708
Feed Conversion (lbs. per lb. of gain)	8.56

PRODUCTION COSTS

Non Feed: (per steer)
1. Wayne Injectable A-D-E, 3cc
2. Wayne Lectro-Sul, ⅓ lb.
3. Wayne Cattle Wormer, 3 lbs.
4. Wayne P-12 Mineral, 8 lbs.
5. Salt, 5 lbs.

Total $3.74

FEED: 64,708 lbs. feed at $2.07/cwt* = $1339.46 (total feed cost)
$1339.46/7,555 (total gain) = 17.72c per lb. gain

* $32/ton for ear corn and $94.31 average price for Wayne 32% Beef Balancer.

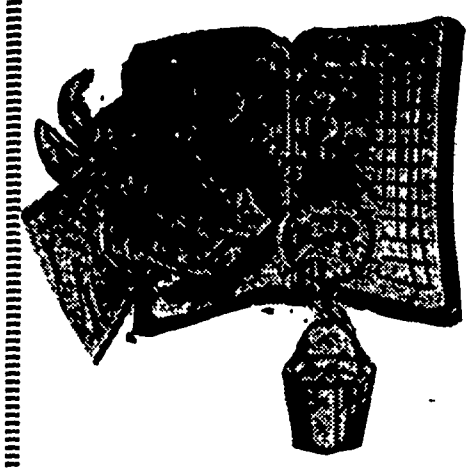
SECOND SECTION



LANCASTER COUNTY DHIA MONTHLY REPORT

A Registered Holstein cow owned by J. Mowery Frey Jr., Beaver Valley Pike, Lancaster, completed the highest 305 day lactation in September according to the latest DHIA report just in from Penn State. Piebe produced 21,576 pounds of milk, 892 pounds of butterfat with a 4.1% test. Second high lactation was completed by a Registered Holstein cow owned by Red Rose Research Center, Pitney Road, Lancaster. L. Madcap produced 18,428 pounds of milk, 864 pounds of butterfat with a 4.7% test in 305 days.

The herd of Lloyd Wolf, Quarryville R2, had the highest daily butterfat average. This herd of 42 Registered and Grade Holstein cows averaged 49.8 pounds of milk, 1.95 pounds of butterfat with a 3.9% test. The herd of Stanley G. Greiner, Manheim R4, placed second with 25.2 Registered Holstein cows averaged 48 5 pounds of milk, 1.86 pounds of butterfat with a 3 8% test

The lactations with 650 or more pounds of butterfat in the first 305 days are as follows:

Facts Dairymen Should Know

By Victor Plastow
Associate Agricultural Agent

Calf Tie Stall

This stall is for calves from birth to 6 or 8 weeks of age while on liquid feed. Plywood dividers prevent ear sucking. Bedding should be used for warmth and comfort Since calves are tied, they cannot contact manure.

The stall is designed for feeding from front or rear. Grain can be fed in a box under the hay rack which also catches the hay leaves. Or grain may be fed in a pail or basin in the pail holder.

If feeding is from the front, allow an alley at least 3 feet wide, as well as a rear litter alley. Plywood front cut-outs are desirable for front feeding. If placed near a wall leave the stall at least 8 to 12 inches from the wall for warmth and do the feeding from the rear. Leave the front panel whole without the cut-outs.

If you are interested the plan No is 723-215

Liquid Protein Feeding

Free choice feeding of liquid protein using various pinwheel or similar devices apparently is not as well adapted to feeding dairy cattle as other ruminants Intakes of supplements containing about 30% crude protein equivalent may average 2 to 3 pounds per head daily with most cows consuming close to the average for the herd. However, a few cows may not consume any appreciable amounts and a few may consume as much as 12 pounds or more per head daily, especially dry cows. Whenever feasible, it would appear best to use alternative methods of feeding liquid supplements, particularly if they are used as the primary means of providing protein supplementation. Many dairymen using free choice liquid feeding do not rely on this as their only means of protein supplementation

Another method of utilizing liquid protein supplements is to include them into the concentrate mixture at a level of 5 to 10% of the mix as fed to the dairy cows In any case the levels used should keep the urea content of the mixture as fed at 1 5% or less in most situations

Feeding High Moisture Corn To Dairy Cattle

Advantages

1 Harvesting can be done 2 or 3 weeks earlier

2 There are less field, harvesting, and storage losses for 25-30% moisture corn than with normal air-dried corn

3 High moisture corn is usually ready to feed when removed from storage or can be crushed as a part of the continuous feeding system, thus several rehandling operations are eliminated

4 This method of harvesting

FOR THE
FARM WIFE AND FAMILY

CAKES! CAKES! CAKES!

Do you need to replenish your cake recipes? How about trying some of these?

WALNUT SOUR CREAM CAKE

- ¾ cup chopped walnuts
- ½ cup firmly packed light brown sugar
- 2 teaspoons cinnamon
- ¼ cup butter
- 1½ cups sugar
- 3 eggs, well beaten
- 1 teaspoon vanilla
- 3 cups sifted regular all-purpose flour
- 1 tablespoon baking powder
- 1 teaspoon salt
- ½ teaspoon baking soda
- 1 cup dairy sour cream

In a small bowl combine walnuts, brown sugar and cinnamon; set aside. In a large mixing bowl cream butter; gradually add sugar and beat until light and fluffy. Add eggs and vanilla; beat 2 minutes. Sift together flour, baking powder, salt and baking soda Add to creamed mixture alternately with sour cream, beginning and ending with dry ingredients. Pour half of batter into pan Sprinkle little more than half the nut mixture over batter. Add remaining batter and top with remaining nut mixture. Bake 35-40 minutes. in a 325 degree oven. (Use a 13x9x2-inch baking pan for this recipe.) Cool in pan on wire rack.

* * * *

DREAMY DEVIL'S FOOD

- 2 cups semi-sweet chocolate morsels
- ½ cup hot water
- 2 tablespoons sugar
- 1¾ cups flour
- 1 teaspoon baking soda
- 1 teaspoon salt
- ⅔ cup sugar
- ½ cup softened butter
- 3 eggs
- ⅔ cup water
- 1 teaspoon vanilla
- 1 teaspoon red food coloring

TOPPING:

- 2 eggs
- 1 cup firmly packed brown sugar
- 1 teaspoon vanilla
- 2 tablespoons sifted flour
- ½ teaspoon baking powder
- ¼ teaspoon salt
- 1½ cups chopped nuts

Combine chocolate morsels and the ½ cup hot water; stir over hot (not boiling) water till chocolate melts and mixture thickens. Add the 2 tablespoons sugar and cook 2 minutes longer. Cool to lukewarm. Sift flour, baking soda, salt and set aside. Combine ⅔ cup sugar and butter; beat till well blended. Beat in eggs, one at a time. Add flour mixture gradually with ⅔ cup water. Stir in chocolate mixture, vanilla and red food coloring. Pour into greased 13x9x2-inch pan. Bake at 350 degrees for 25 minutes.

While cake bakes prepare topping: Beat eggs till thick and lemon-colored (5 minutes on high speed on electric mixer). Add brown sugar and vanilla; beat till well blended. Sift flour, baking powder and salt; blend into creamed mixture. Stir in nuts. Spread evenly over top of hot cake. Bake 20 minutes more in 350 degree oven. Cool. Cut into squares.

* * * *

CALIFORNIA HERITAGE CAKE

- 2¼ cups sifted flour
- 1½ cups sugar
- 3 teaspoons baking powder
- 1 teaspoon salt
- 5 egg yolks
- 3 tablespoons grated orange peel
- ¾ cup fresh orange juice
- 8 egg whites
- ½ teaspoon cream of tartar

Sift together dry ingredients in large mixer bowl. Make a "well" in the center and add egg yolks, orange peel and juice. Beat at medium speed until very smooth. In another large bowl, beat egg whites until frothy; add cream of tartar and continue beating at high speed until very stiff peaks form. Carefully pour batter over whites; gently fold until well blended. Pour into ungreased 10 inch tube pan. Bake at 325 degrees for 55 minutes Invert immediately and let stand until cool. Remove from pan; with a serrated knife, slice into 3 layers. Spread each layer with Orange Filling*; sprinkle Nut Crunch**, reserving large chunks for top. Spread remaining filling over top of cake and garnish with remaining nut mixture.

*ORANGE FILLING

- 1 cup sugar
- ⅓ cup cornstarch
- ½ teaspoon salt
- 3 egg yolks, slightly beaten
- 1½ cups cold water
- ⅔ cup fresh orange juice
- 2 tablespoons grated orange peel

In small saucepan, combine sugar, cornstarch and salt. Blend egg yolks with water and orange juice; stir into sugar mixture. Bring to a boil over medium heat, stirring constantly; boil 2 to 3 minutes. Remove from heat; add orange peel. Cool completely, stirring occasionally.

**NUT CRUNCH

- 1 cup sugar
- 1½ cups chopped walnuts

In heavy skillet, slowly melt sugar until light golden brown. Quickly add nuts and stir until coated with sugar. Turn out immediately onto buttered cookie sheet. When cold, place in plastic bag and crush with rolling pin.

* * * *

CRANBERRY ORANGE SPICE CAKE

- ½ cup shortening
- 1 cup sugar
- 1 egg, beaten
- 1 cup raisins
- ½ cup nut meats
- 1¾ cups sifted all-purpose flour
- ¼ teaspoon salt
- 1 teaspoon soda
- 1 teaspoon baking powder
- 1 teaspoon cinnamon
- ½ teaspoon cloves
- 1 14-ounce jar cranberry orange relish

Cream shortening and sugar, add egg. Stir in raisins and nuts Combine dry ingredients and sift; add to raisin mixture. Stir in cranberry orange relish. Bake at 350 degrees for about 1 hour in greased tube pan, or in 2 greased 8-inch layer cake pans for 30 to 40 minutes. Recipe will make 20 to 24 cupcakes.

Came From Afar

Anthropologists believe the original inhabitants of Madagascar, an island which lies only 250 miles off the southeast coast of Africa, came from Melanesia and Indonesia, 4,000 miles away.

"Advertising has become essential to success in any business" — Walt Whitman.

HOLLAND STONE
a luxury you can afford

Inside, outside, you'll find the rich quarried look of HOLLAND STONE adds a touch of real elegance to your building designs. And yet, HOLLAND STONE is one of the most economical building materials today. Its unique versatility in size and shape lends a structural freedom to builders, meeting new ideas, as well as cost problems. Comes in a wide choice of naturally warm, distinctive colors, plus Colonial white.

Correspondence Courses

ENTERTAINING AIDS

This is the entertaining season. It begins with saying "Welcome" to new neighbors in the fall and decreases when the Christmas holidays are over.

Your entertaining may be as simple as a cup of coffee to welcome a new neighbor, a stop by invitation after a football game, or a formal reception. Either takes some planning and know-how.

For those who are unable to relax and enjoy their own parties, The Pennsylvania State University offers a course titled Guides to Entertaining. The course is designed to give you confidence and the know-how to make your entertaining successful.

You'll find ideas for food to serve, decorations, and management. Correct forms for invitations, clothes for the occasion, good grooming practices, and etiquette are included.

A new lesson in the course is titled QUICK AND EASY MEALS. There you'll find suggested combinations of foods for quick meals when guests drop in, and foods that can be successfully prepared ahead. In this lesson Mrs. Alene Mintz, the author, has shared some of her most successful recipes. Once you've used them she feels sure you'll file them with your favorite ones.

You'll have time to use the information in the course as you make plans for entertaining if you send for the course now. Send $2.25 to Guides for Entertaining, Box 5000, 202 Agricultural Education Building, University Park, Penna., 16802. Make check or money order payable to The Pennsylvania State University.

Farm Women Installed At Co. Convention

Two new officers were elected at the 51st annual convention of The Society of Farm Women of Lancaster County held Nov. 2 at the Farm and Home Center.

They are Mrs. Henry R. Hess of Society 22, secretary, who succeeds Mrs. Everett Kreider of Society 17, and Mrs. Abram H. Weidman of Society 5, treasurer, who succeeds Mrs. John Frantz of Society 15.

Mrs. Scott Nissley, 1414 Nissley Road, will continue as county president through 1969.

The newly elected county officers and other officers of the local societies were installed by Mrs. W. F. Dummer of Thomasville R1, state president.

Guest speaker was Richard Canfield, clinical psychologist at Philhaven Hospital.

Horse Dies After Hitting Cars

A five year old quarter horse, owned by Guy D. Buch, 613 S. Broad St., ran from the side of the Buch home and into the path of a car driven north on S. Broad St. by Mrs. Mary F. Heck, 111 N. Liberty St. on Nov. 2, The horse, who was wearing a halter attached to a chain and cement block bolted into the street so suddenly Mrs. Heck said that she didn't have any time to take evasive action.

After the horse collided with the Heck car, it continued running north on S. Broad St. to the vicinity of Second Ave. where it fell onto and under the parked car of Mrs. Irene Keen, 324 N. Broad St. which was occupied by John Keen. The Keen car was pushed into another parked car, owned by Mary E Doll, 1308 Main St., Akron, shortly after hitting the Keen car the horse died.

The horse was valued at $400 Damage to the Heck car was estimated at $400 and $176 to the Keen car. The Doll car received no personal damage.

YOU CAN ALWAYS spot a pro by its style, and this sleek pullover has it. The two tone combination of a black body with camel sleeves is first-rate. It is made of washable "Wintuk" Sport Yarn in the simple-to-knit stockinette stitch. Free instructions are available for men's sizes 38-46. Just send a self-addressed, stamped envelope to the Needlework Editor of this newspaper along with your request for Leaflet PK 4800.

Ladies, Have You Heard? . . .

By Doris Thomas, Extension Home Economist

How To Redecorate Inexpensively

Redecorating doesn't have to be expensive. The less you have to spend, the more you need to rely on color. Try to decide on a unified color scheme throughout your house before you start redecorating. This can help your home appear larger. And you can economically interchange draperies and rugs.

THOMAS

Select colors you and your family like The furnishings you now have can determine the colors you choose. A miscellaneous set of furnishings can often be pulled together by a related color scheme.

You need to consider the limitations of the setting of your house. Rooms that face south and west get more heat and light than do those facing east or north. Perhaps you want to use cool colors in south and west rooms, warm colors in east and north rooms.

There's another economical feature to color choice. Colors that don't fade or fade gracefully mean fewer paint jobs. Nature's colors — greens, blues, and browns and their hues — not only reduce daily and weekly care but they stay good-looking longer than do most clear, sharp colors Remember, color can help you achieve a new look in decoration, economically.

Tips On Furniture Care

Proper furniture care means more than casual dusting once a day You need to take some

Get the ABC's of custom kitchens from L & B

Right from the start, your L & B kitchen planner will guide you through the steps that lead to the kitchen of your dreams. First he analyzes the area of your present kitchen and discusses many possibilities with you. Then he asks for your opinions and desires . . . and finally designs a kitchen that will knock your eye out. When you follow the ABC's from L & B, you'll see a kitchen take shape that's more beautiful than you expected (due to L & B design experience)—that's exactly what you wanted (due to your stated requests)—and priced within your budget.

Universities Report Progress On Poultry Research Projects

Research directors from the Universities of Maryland and Delaware reported progress in nearly 50 research projects involving broilers, when university men met with Delmarva poultrymen recently in Easton

The meeting was called at the suggestion of Mr. Tom Whittington, president of Delmarva Poultry Industry, Inc (DPI) and arrangements were made by Mr. Frank Gordy, DPI secretary.

From the University of Delaware, Dr W J. Benton, head of the Animal Science Department, reported that one of their most exciting experiments was aimed at finding ways to separate broilers from their litter. At present they are raising the birds in cages, but "we believe there may be better methods, and we are looking at some of them" he said He reported on 12 projects that are underway or in the planning stage

Delaware's Dean of Agriculture, William McDaniel said he believes that university research must change to keep pace with the times as poultry production changes from the 160 acre farm producers to the "Rockefeller-Standard Oil type of operation"

Dr Frank Bentz, vice president for agricultural affairs at the University of Maryland gave an overview of agriculture at the University

He called attention to the $92½ million that the broiler industry contributes to the state's economy each year "This is about 28 per cent of the total cash farm receipts and is a sizeable portion of the estimated $1 2 billion contributed to the state's economy by the total agribusiness industry," he said.

He outlined a detailed study of Maryland agriculture now underway at the University. The study will consider the present status, problems and potentials of all phases of the industry "When completed early next year, it will provide the basis for a ten year plan for agriculture at the University," he said.

Dr I. C. Haut, director of the University of Maryland Agricultural Experiment Station, reported that 34 projects in "poultry and poultry science" are currently underway at the University He congratulated the poultry industry representatives for the fine cooperation they are extending to the institution "We are having more cooperation than ever before — more sharing of ideas."

To identify some of the progress, he pointed out that 55 publications reporting on poultry experiments have been produced by the University since the 1965 annual report of the Experiment Station.

Dr. Clyne Shaffner, head of the University's Poultry Science Department, reported that: In addition to a large number of nutrition studies, researchers in his department are working on breeding lines of poultry that may be resistant to one or several diseases plaguing the industry; chickens that will use proteins more efficiently; handling methods to prevent bruising on dressed broilers; processing methods to protect dressed poultry quality, and many other investigations on management, breeding and feeding.

Dr. R L. Green, head of the Agricultural Engineering Department, reported on the initial studies under way at the University's new Experimental broiler facility at the Salisbury substation He said the work there is in initial stages, but the facilities promise some excellent possibilities for future studies in poultry housing.

Experiments on new varieties of soybeans and other studies involving the production of feed grains on the Eastern Shore are progressing well, according to a report by Dr. James Miller, head of the University's Agronomy Department.

A simulated broiler program (computerized) has been developed by researchers in the Department of Agricultural Economics, said Dr. John Curtis head of the department. Information gathered from this study should lead to more orderly production and marketing of broilers on the Delmarva peninsula.

Poultry industry representatives suggested several possible fields where they felt university research would be beneficial.

Dr. Donald Davis of Caroline Farms said he believes the time has come to offer indemnities, if necessary, to eradicate laringotracheitis (a serious economic disease in broilers). Ernest Matthews, of DPI, urged the researchers to find more ways to reduce labor costs in the processing plants — or to find more efficient ways to processing birds.

Another labor problem could be partially solved — and with it some of the bruising problem — if mechanical catching and crating birds in the brooder houses could be perfected, said Dr. John Hammond of O. A. Newton & Sons.

Harry Palmer of Otis Feeds suggested that more work should be done on developing new poultry products — such as a "pre-cooked poultry roll."

Both industry representatives and university officials expressed a desire to get together again — perhaps on a twice yearly basis — to discuss mutual problems.

"America"

The coastal regions of what are now Argentina, Brazil and Uruguay first bore the name "America." The name gradually came into use for all of South America and was later given to both continents.

PLANT NEW ZEA IIII FUNK'S G HYBRID

JOIN THE CORN YIELD EXPLOSION!
New "HOT LINE" Hybrids
It takes new ideas in hybrids to make the most of intensified corn growing practices. And that means Funk's new ZEA IIII Hybrids. They outyield old favorites . . . stand better under thick planting and heavy fertilization . . . battle pests and bad weather . . . produce quality grains.

Increase Your Corn Profits
ZEA IIII Hybrids generate bigger returns from your increasing investment in fertilizer, weed killers and insecticides. They produce a real YIELD EXPLOSION when moisture and fertility are right . . . and better crops than you expect under less desirable conditions.

Farmer Gets 1½ Cents For Wheat In Bread Loaf

Today's farmer is receiving only 1-½ cents for the wheat used in a loaf of bread, the Pennsylvania State Grange was told recently at Butler at its 96th annual session.

State Secretary of Agriculture Leland H. Bull informed the Grange that the price farmers get for wheat—$1.09 a bushel — is the same price farmers received in 1936 when bread sold for seven to nine cents a loaf.

Secretary Bull expressed "concern" about the widening gap between the prices farmers receive for the products and the prices consumers pay for food in stores.

He also expressed concern about the "alarming" spread of gypsy moth in Pennsylvania. He said the moth, which destroys hardwood trees, was found in 19 counties the past summer.

Secretary Bull said the insect was found in 654 sites this year, at 252 sites last year and at only 60 sites in 1966.

and storing corn adapts readily and easily to mechanized handling and dry-lot operations.

5. Storage costs are relatively inexpensive.

6. Storage is relatively rodent free.

Disadvantages

1. The moisture per cent of corn to be harvested must be known to properly harvest and to store with a minimum loss.

2. Top spoilage can be great if the right amount is not fed each day.

3. How to feed protein and mineral supplements as well as how to feed the high moisture corn, particularly in systems not designed for automatic feeding.

4. Extra equipment may be needed to handle the high moisture corn.

5. An extra silo may be needed.

6. Corn stored in this manner must be fed.

7. Power for conveying this corn by auger is greater.

8 More weight must be handled in this system.

Two Tests For Beef Cattle Can Increase Herd Profits

Two inexpensive but important beef cattle tests, pregnancy and performance testing, can increase profits from purebred or commercial beef cow herds, according to Lowell L. Wilson, associate professor of animal science at The Pennsylvania State University.

The records of most beef cow herds will show that these tests pay dividends, Dr. Wilson says. For example, the average feed cost for wintering a spring-calving brood cow is about $35.00. If all of the cows in a herd have a calf and raise it to weaning age, the average wintering feed cost is $35.00 per calf.

However, if only 80 per cent of the cows produce and wean a calf, the wintering feed cost per calf averages $43.75. The latter herd would have $8.75 less net profit per calf because of the low calving rate.

To guarantee that all cows kept during the winter are pregnant, Dr. Wilson suggests having a veterinarian test the cow herd for pregnancy between 45 and 120 days after the last cow is bred. Cows not pregnant can be sold for slaughter.

Dr. Wilson reports that crossbred beef cows are likely to show a higher fertility record than straightbred cows. He cited the Angus-Holstein beef cow herd at the State Correctional Institution at Rockview, near Bellefonte, in which over 96 per cent of the cows were diagnosed pregnant this year. This herd has had a very high fertility record for several years.

Performance testing of beef cattle is similar to herd improvement programs among dairy cattle, he points out. Records of calving ability, weaning weight of calves, and feed efficiency from weaning to slaughter show the production of each cow. In the herd at Rockview, cows differed as much as 175 pounds in the weaning weights of their calves, a value of about $50.00.

● Have You Heard?

(Continued from Page 15)

precautions for your wood pieces to be as beautiful through the years as when you first bought them. For example, use pads to protect wood surfaces from rubber based lamps, telephones, or radios.

You also need to keep lampcords from wood surfaces. Sulfur in reconstituted or synthetic rubber used in cords and lampbases affects the finish of the wood. It may cause yellowing of the finish where rubber comes in contact.

Direct sunlight can also cause color changes in furniture wood. Some woods, such as cherry, are more susceptible to color change than others. And all woods will change color if exposed to strong sunlight for a long time.

Remember that dust is an abrasive. When you rub dust off wood and apply too much pressure in the motion — it can cause fine hairline scratches You want to pick dust up with a cloth, not just push it around on a surface. You can protect the investment you have in furniture by practicing proper care and cleaning methods.

Practical Clothing Care Tips

Be sure garments or fabrics have been preshrunk or stabilized.

After you buy a garment, keep the hangtags so you know how to care for the garment.

Don't leave stains in any fabric. They will set or become permanent. And insects like stains.

Blot away as much of a stain as possible right away. Don't rub. Rubbing will spread a stain and may damage surface fibers —especially silk.

If you use a spot remover, test on a hidden seam first. Some spot removers affect some fabrics and dyes.

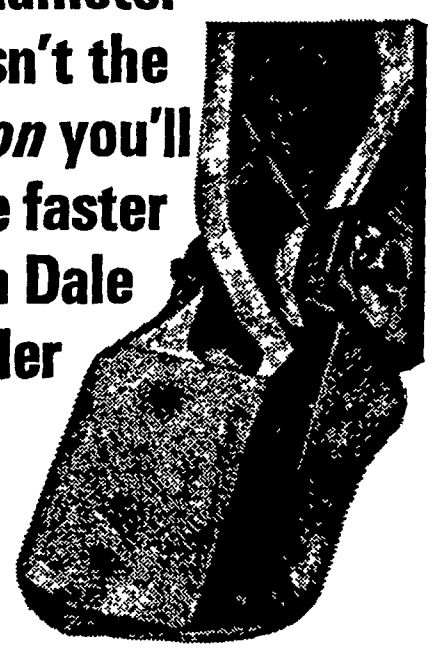
Launder or dryclean clothes regularly. Abrasion from wear and soil wear out clothes.

Avoid pressing a garment in which there are spots or perspiration salts or body oils.

Rotate your wardrobe. Clothes, like people, need a rest and airing.

PIONEER OF BETTER IDEAS IN SILO UNLOADING

A 2-foot diameter impeller isn't the *only reason* you'll feed cattle faster with a Van Dale silo unloader



HERE'S ANOTHER...

...*pioneered* by Van Dale back in 1957 . . . the heftier cast iron swinging V-paddles. They give the impeller more unloading *capacity*. Each 6 lb. V-paddle is weighed, matched, and balanced, then pre-run for more dependable performance. And then there's the solid-weld construction of the heavier gauge impeller housing for longer life in the silo . . . and the biggest impeller *throat* . . . and there are many more reasons that contribute to Van Dale's superior capacity and reliability in addition to the impeller . . . like the double augers and the . . . But why not let us tell you about them. We'll be happy to drop by to see you at your convenience.

FABULOUS EARNINGS FORECAST!

9%

A SAFE NEW INVESTMENT PLAN SECURED BY LAND HOLDINGS

Here is great news about a new investment plan that is now paying a total of 9% on any amount invested. Local investors show extreme confidence!

WELL KNOWN INSURANCE MAN JAMES E. MILLEN, JR. INTRODUCES NEW PLAN TO AREA

"Invest any amount you wish!" says James E. Millen, Jr. of the MILLEN INSURANCE AGENCY, AKRON, PENNA. "Any amount up to $25,000.00 will earn a total of 9% and nearly everyone is eligible to participate. The investment organization, known as UNITED LAND DEBENTURES, is backed up and secured by thousands of acres of valuable land. Because land almost never depreciates, your money earns an unusually high profit."

MOST BANKS OFFER 5% OR LESS

The investment plan has gained wide-spread local attention from FARMERS and BUSINESS PROFESSIONALS. It's an obvious winner! With the costs of living continually rising, 9% earnings on your money gives great advantage to future security.

AVERAGE MONTHLY

WEATHER OUTLOOK

Weather Bureau Extended Forecast Division

FOR NOVEMBER 1968

PRECIPITATION will exceed normal along the West Coast, the west and central Gulf Coast, and over much of the Northeast. Sub-normal rainfall is expected over the Rockies, the Central Plains, and the upper Mississippi Valley. Near normal totals are in prospect elsewhere.

TEMPERATURES are expected to average below seasonal normals over the southeastern third of the Nation with greatest departures in the South Atlantic and East Gulf States. Predominantly above normal temperatures are expected over the western half of the country. In unspecified areas near normal averages are indicated.

Warwick FFA Installs Eleven Members

On Friday, November 1, the Warwick FFA Chapter officially installed eleven new members into their chapter as Green Hands at W.H.S. The ceremony was conducted by the chapter officers at their regular meeting. Those gaining membership were: Calvin Hartman, Dale Martin, Roger Patterson, Allen Kline, Tony Haldeman, Nelson Boll, Kerry Stauffer. Dennis Styer, Robert Styer, Kenneth Weaver and Andrew Byerly.

Following the ceremonies, last years Green Hands were raised to Chapter Farmers. Those receiving the highest degree that a local chapter can confer were: Mike Herr, Randy Balmer, David Fisher, Lamar Dull, David Peters, Kenneth Grube, Dennis Hess, Wray Kiralfy, John Horning, Gerald Martin, Glenn Showalter, Jay Showalter, and Wayne Siegrist.

Several members will be making application for the highest degree in the county, The Red Rose Degree later in November. Three of the members have forewarded applications to the state level for The Keystone degree, which is awarded at The Pennsylvania State Farm Show in January.

A View From The Governor's Office

By Gov. Raymond P. Shafer

In the first ten months since its enactment, some $78 million of Pennsylvania's new conservation bond issue already has been allocated to 212 land and water reclamation projects throughout the Commonwealth.

Signed into law on January 19, 1968, as the first step to the Golden Age of Conservation to Pennsylvania, appropriations already made under the $500 million bond issue soon will result in:

–Eleven new State Parks to be built throughout the Commonwealth at a cost estimated at $19.3 million, all of which are expected to be functional within from three to seven years.

–A State-wide system of 69 new community parks and recreational areas with $6.2 million of the estimated $12.8 million construction costs to be paid by the State.

–Sixty-three new sewage treatment plants to be built by communities throughout the Commonwealth with 25 percent ($11.9 million) of the total construction costs coming from the State for the first time in history.

–A total of 49 projects under a new action program—"Operation Scarlift" — to curb stream pollution from acid mine drainage and cure other ills of past coal mining operations at a cost of $33.2 millions.

–Creation of three new waterfowl management areas and improvement to small game habitat and access roads on 29 State Game Lands located in 24 counties throughout the Commonwealth at a cost of $4.7 million.

–Four new Fish Commission lakes, a new trout hatchery and expanded facilities at another hatchery for warm water species such as muskellunge at a cost of $2.1 million.

The $78 million needed to complete all of these projects already has had my approval for expenditure out of the $100 millions of bond issue funds appropriated by the General Assembly earlier this year. Future funds will be sought from the Legislature biennially over the next eight years.

The speed with which all State agencies involved in the expenditure of this new bond issue money which was approved by the people of Pennsylvania only last year is, indeed, highly commendable and I am certain that the day is not far off when all of us will begin to see the physical results of the most far-reaching conservation and reclamation program ever begun by any State in the Nation.

For example, only last week I approved and signed a contract in the amount of $891,290 for construction of the dam which will create a 205-acre lake at the new Tunkhannock State Park on the South Branch of Tunkhannock Creek in Lackawanna County.

Work on this project is scheduled to begin this week, with construction expected to be completed by October, 1970. When finally filled, the lake, along with shoreline developments to be built, will serve thousands of recreation-seekers in the Scranton-Wilkes-Barre area.

Bids for construction of the Little Buffalo Creek State Park dam in Perry County will be opened on December 5, and those to rehabilitate the dam on Upper Locust Creek in Schuylkill County will be advertised in February.

Other new State Parks which will either be in design or construction before July include Codorus Creek, York County; Laurel Ridge, Fayette and Somerset Counties; Nolde, Berks County; Ohiopyle, Fayette-Somerset; Ridley Creek, Delaware County; Sandy Creek, Mercer County; Tyler, Bucks County, and the Shikellamy Marina, Northumberland.

Even more dramatic is the speed with which the Department of Mines and Mineral Industries has begun an action program designed to clean our streams of acid mine waters and cure the ills of past coal mining operations.

Already approved for early action are 33 stream pollution abatement projects designed to remove acid wastes from abandoned mines, five which will curb air pollution by extinguishing burning culm banks, four to fight underground mine fires and seven to prevent future surface subsidence.

In addition, the Department already has taken delivery on three of four mobile acid mine treatment plants, and one of these is currently testing the waters flowing into East Branch Dam on the Clarion River in order to determine the kind of permanent facility needed to clean the waters of Pennsylvania's Dead Sea.

MILLER

ALFALFA FERTILIZER WITH WEEDKILLER

0-15-30

BORON AND KARMEX ®

For maximum Alfalfa yields and quality, use Miller Alfalfa fertilizer-weedkiller this fall and winter.

1. 0-15-30 fertilizer contains the proper amount of Boron to insure hay yield and quality.
2. Apply at 500 lbs. per acre.
3. Karmex has proven to be a superior product for control of winter annual weeds in Alfalfa, such as CHICKWEED, WILD MUSTARD, SHEPHARDS PURSE and others.
4. Do two jobs at one time, FERTILIZE — KILL WEEDS.
5. Let us spread this product for you to insure proper application.
6. Apply after alfalfa goes dormant.

Compare Size And Price For Good Values In Food

Start saving pennies by making a food shopping list at home, suggests Harold E. Neigh, Extension consumer economics specialist of The Pennsylvania State University.

When you get to the food store or supermarket, compare prices by weight to see if you're getting a bargain. Buy a size container to fit your family's size and appetite. Large sizes won't be a good buy unless all the food will be eaten, or you've planned menus in advance to use any leftovers.

At the meat counter, check the cuts and grades of meat, advises Mr. Neigh. Figure cost of meat by the number of servings per pound, not only by price per pound. In general, one pound of boneless meat yields four servings. Meat with some bone yields two servings per pound, and bony meat will usually yield one serving per pound.

Another penny-saving tip is to select quality according to the way you'll prepare and serve the food. Broken pieces of canned tomatoes cost less than whole tomatoes and are a good choice for a casserole. Usually lower grades are lower priced and they may serve the purpose as well as higher priced grades.

You may wish to consider buying case lots of some foods if you have adequate storage. But first check the price. Buying in quantity may not cost less but you may do it for convenience, says the specialist.

At the frozen food counter, buy items that are frozen solid. Any food above the fill-line may be partially thawed, frosted, or icy.

Be flexible as you shop. If quality and price of meat or produce are not what you had expected, consider buying a similar food for your menu.

STUDY SHOWS DAIRY COWS AVG. $526 IN EXPENSES

"Old Bossy" must gross at least $526 just to pay her bills, according to a study by Kansas State University Extension economists.

The specialists examined records of dairymen in 11 south central Kansas counties from 1965 to 1967. They found that dairy cows grossed an average of $645 a year during this period.

Expenses for each animal averaged $526, leaving an average of $118 for labor and management per cow for the operation.

1965 was a low year for dairy income. Nonfeed costs averaged $151 per cow and feed costs $371 per cow that year.

Nonfeed costs include interest, machinery costs, building depreciation, personal taxes, hired labor, veterinary and livestock expenses, and repairs or permanent improvements.

A reasonable goal for modern dairymen is an annual gross of around $700 per cow. This would allow a decent return for his labor and management.

Some dairymen are realizing this goal, but a majority are not.

143,000 tons of steel was used in construction of the San Francisco Bay Bridge.

Animal Birth Abnormalities Not Related To Pesticide Use

The use of pesticides cannot be considered responsible for undesirable genetic changes, birth abnormalities, or reduced performance in animals if the pesticides are used as recommended by the manufacturer and approved by various state and federal regulatory agencies. This was the main conclusion of Dr. Lowell L. Wilson, associate professor of animal science at The Pennsylvania State University, in recent testimony before the Pennsylvania Senate committee studying the use of pesticides in the Commonwealth.

The report was based on a comprehensive review of scientific literature dealing with different factors that have pro duced "mutations, which are changes in the genetic material carried by plants and animals, or abnormalities at birth. Among the non-chemical agents having these undesirable effects are radiation, age of parents, and temperature.

Several chemical agents, including some rather common pesticides, have also reportedly caused birth abnormalities. In practically all research studies in which these chemicals were used, the amounts of the chemicals were many times greater than the amount to which an animal would be exposed under normal conditions of pesticide usage.

Dr. Wilson also cited studies in which common salt, butyl alcohol, caffeine from coffee, and carbon tetrachloride cleaning solution had reportdely caused the same undesirable effects.

Several studies were conducted by injection of chick embryos with the test material According to Wilson, many of the birth abnormalities may have been caused by physical damage to the embryo tissue rather than by the chemical nature of the materials

There is practically no possibility, he concluded, that the use of pesticides at approved levels, and applied by recommended methods will result in undesirable effects. Without proper pesticide usage, the level of agricultural production would be greatly reduced and certain natural resources, such as forests, could be ravaged by insects

LARGE REAL ESTATE SALE

Two Farms Containing 393 Acres

SATURDAY, NOV., 23 1968

At 11:00 A. M.

Located on Airville, R. D. #2 along Rt. 425 in the village of Woodbine, Fawn Twp., York Co., Pa.

FARM NO. 1

Tract #1 — ¾ acre improved with a beautiful spacious 8 room stone and frame house, containing 4 bedrooms, kitchen, dining room with fireplace, large living room with wall to wall carpet, office, foyer, 2½ baths & cemented basement. Heat consists of an oil fired radiant & hot air furnace by which water is also heated. Other improvements are a 2 car garage & macadam driveway, plus ample shade & lawn area. Don't miss seeing this better than average country home at sale.

Tract #2 — Approx. ½ acre adjoining tract #1 improved with a block & frame house consisting of 3 bedrooms, kitchen & living room, bath & full basement. Home has oil hot air heat & electric hot water heater.

Tract #3 — Containing approx. 105 acres of which approx. 60 acres is meadow with stream & road frontage, 37 acres tillable & 8 acres woodland. This tract is improved with a large bank barn, 2 silos & milk house with bulk tank.

Tract #4 — Containing approx. 70 acres of land on the southwest side of Rt. 425 having approx. 2000 ft. of road frontage, 35 acres tillable, 25 acres timberland & 10 acres pasture with 2 good springs.

Tract #5 — Containing 3 acres of land on the southwest side of Rt. 425 with road frontage & entirely bordered on one side by a stream. Don't miss this one for a good building site.

Farm #1 as whole contains approx. 178 acres of which 90 acres are tillable, 30 wooded & 58 acres pasture, with 2 houses & barn. This will also be offered as a unit.

FARM NO. 2 ADJOINING FARM NO. 1

Tract #6 — Containing approx. 90 acres with 75 acres tillable, 15 acres woodland. This tract is also improved with a large bank barn, 7 room frame house, having 3 bedrooms, bath, kitchen, dining & living room with wall to wall carpet, full basement, oil hot air heat, new electric water heater.

Tract #7 — Containing approx. 125 acres, 55 acres tillable, 55 acres of good timberland with stream & road frontage, 15 acres pasture. This tract of land affords an excellent view of the surrounding area.

Farm #2 as a whole contains approx. 215 acres of which 130 acres are tillable, 70 acres wooded & 15 acres pasture with house & barn. This will also be offered as a unit.

Finally farm #1 & #2 as a whole containing approx. 393 acres will be offered in its entirety. Here is an ideal location, only 15 min. drive to the new bridge at Holtwood & approx. 45 min. to York, Lancaster & Baltimore.

For inspection by appointment call 717-862-3953. Terms — 10% down, balance in 30 days.

Leading Livestock Officials To Take Part In Short Course

A number of nation's leaders in practical livestock breeding will head a list of authorities who will participate in a short course on livestock improvement and genetics December 10-11 at The Pennsylvania State University.

The course, of interest to both purebred and commercial livestock breeders in Pennsylvania and neighboring states, will deal with the many different aspects of improving the production level of all species of livestock, said Dwight E. Younkin, Penn State Extension livestock specialist.

Younkin points out that interested livestockmen should write to The Pennsylvania State University Short Course Office, 410 J. Orvis Keller Building, University Park, Pa. 16802 for course details and applications.

Included on the program are Dr. L. V. Cundiff of the University of Nebraska; Dr. C. M. Parker of Ohio State University; and Henry Matthiessen, Jr., and David Brower of Still House Hollow Farms, Hume, Va. All are recognized authorities in livestock management and genetics.

Faculty members from Penn State's Animal Science Department participating in the program are Dr. T. B. King, Dr. T. L. Merritt, Dr. G. S. Sherritt, Dr. L. L. Wilson, and Professor H. R. Purdy.

Several of the topics to be discussed are ways different animal characteristics are inherited; how to accurately measure the performance of different characteristics, such as rate of growth, conformation and carcass desirability; effects of inbreeding, linebreeding, and crossbreeding on the amount of genetic improvement and level of production, and the challenges faced by today's livestock breeder and how they will meet these challenges.

"The variety, thoroughness, and practical application of the discussion topics makes this short course valuable for progressive beef, cattle, horse, sheep, and swine breeders," Younkin emphasized.

Frey Cow Has 1,015 Lbs.

The 2,574th yearly production record exceeding a half ton of butterfat has been completed by a Registered Holstein cow, Fultonway Ivanhoe Pattie (GP), owned by J. Mowery Frey & Son, Fultonway Farms, Lancaster

The Pennsylvania Holstein's official record of production totalled 27,871 lbs of milk and 1,015 lbs of butterfat in 365 days She started her lactation at the age of 7 years and 7 months and was milked twice daily

"Pattie" was bred in the Frey herd She was sired by Osborndale Ivanhoe (EX), a bull that has earned a Gold Medal Sire recognition

Pennsylvania State University supervised the weighing and sample testing of her production in cooperation with the Dairy Herd Improvement Registry program of the Holstein-Friesian Association of America.

Don't Mulch Tree Seedlings Too Early

Too Early — The reason for mulching is to help keep the ground frozen after cold weather sets in And this helps to keep the little roots cold all winter So, wait until the ground becomes a bit colder, and leave the mulch around the seedlings until late March or early April.
